

Biner-Ellison originated the FEED-O-MATIC in 1949. Originated the FEEDOMATIC CLEANER in 1951. Since then hundreds of these machines have been built. A feeder paces a packaging line. Its gentle action never mars or scratches glass containers. With the ability to feed and clean simultaneously, the FEEDO-MATIC is a most desirable and necessary machine.

FEEDOMATIC AIR CLEANER, MODEL FAC-36

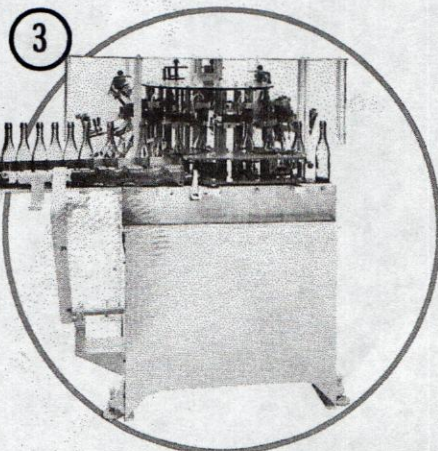

Simultaneously feeds, removes carton lint and dust and single-files containers from 36" wide mesh belt to line conveyor. Rapid Line Dividers for fast change over. Totally adjustable from gallons to ounces with no additional container change parts required. Speeds variable to 200 plus per minute.

FEEDOMATIC SINGLE-LINER, MODEL FSL-36

Feeds containers from 36" wide mesh belt in single-file to line conveyor at speeds variable to 200 plus per minute. Easy to change discharge direction. Air Hold Down Bar available for light weight plastic bottles.

The 'OVER & OUT' ROTARY CLEANER inverts the container 180° and cleans with compressed air while container is upside down. The 'OVER & OUT' cleaner has a synchronous drive to power the FEEDOMATIC, creating a simultaneous operation.

"OVER & OUT" ROTARY AIR CLEANER, MODEL RAC-32

High speed, continuous motion, air cleaner with positive bottle controlled infeed and discharge star wheels. Bottles are turned 180° "OVER" and particles are blown "OUT" and collected by a suction system . . . Speeds on 32" diameter machine to 150 per minute. Larger models available.
