**Climax
Model DP3-I**

Featuring
Exclusive Climax  New Center Case Lift

New Air Cush'n Center Case Lift
assures better control of the case.
Eliminates maintenance.
No lubrication. Trouble free.

The Climax DP3-I Case Packer is a proven machine—and at a low price. It provides more packer for the price than any other comparable type. Yet, there has been no sacrifice, either on the famous Air Cush'n principle or other quality features of the previous line of Climax packers.

The new Climax DP3-I Packer will pack up to 20 cases per minute and offers many new features: more positive lane adjustment; all components located for easy maintenance; centralized lubrication; improved oscillating system for bottle in-feed—eliminates line jams;

simplified operator push-button controls; centering rolls for positive case centering; positive case detection on the elevator with electric eye system which assures proper positioning of the case before packing.

This new labor saving, lower cost equipment will handle a full range of container sizes, all standard case patterns, plastic, fibre, or wood cases. Changeover from one type of container to another is simple and quick.

Your Climax representative will be glad to show you how perfectly a new Climax DP3-I Case Packer will fit into your particular operation.

Only the Climax DP3-I offers you all these advantages

*AIR-CUSH'N

... quick, positive yet absorbs shock, minimizes noise.

VERSATILITY ... handles wood and plastic cases, full range of containers and standard case patterns.

NO LABEL-SCUFF ... achieved by exclusive Climax design features.

MECHANICAL CASE CENTERING

for positive location, trouble-free loading.

LANE DIVIDERS

easily adjusted ... even switch from 4-lane to 3-lane.

SAFETY-PROTECTION ... machine, bottles and operator are fully protected.

15-MINUTE CHANGEOVER ... even loading grid easy to handle.

UNIQUE CONTAINER STOP ... moves a maximum of two rows of containers, not whole case.

AGITATION ACTION ... assures full capacity and uniform loading.

Air Cush'n Design Packer

Exclusive with Climax, it reduces impact on container and shock to machine. The most efficient design available, it virtually eliminates maintenance on the elevator section proved by years of field service.

Air Cush'n substitutes the shock and noise absorbing properties of a low pressure Air Cush'n for the inflexibility of mechanical, hydraulic and even air cylinder case lifts. It lifts positively, quickly and precisely for trouble-free packing, even under 3-shift operation:

CONDENSED SPECIFICATIONS

Capacity: up to 20 cases per minute

Bottle Conveyor Height Above Floor: 36" minimum

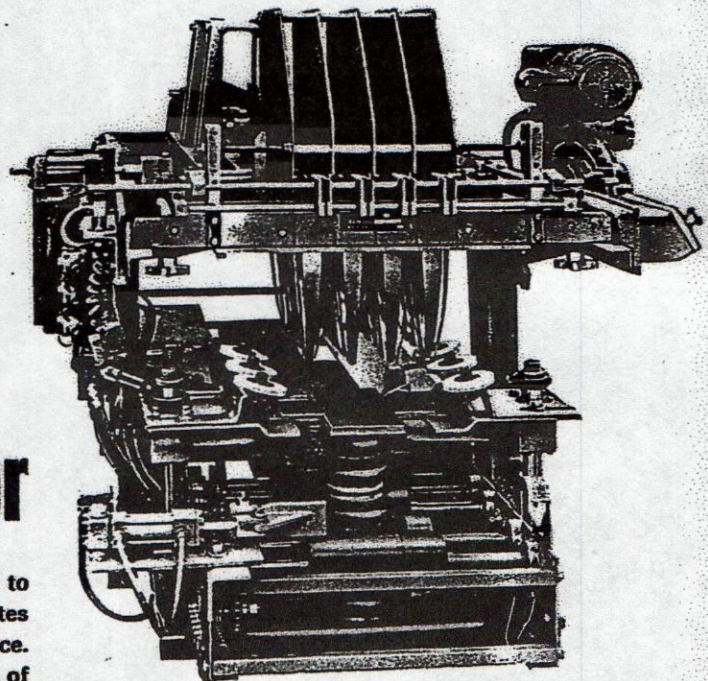

Case Conveyor Height Above Floor: 11" minimum

Drive Motor: one HP vari-speed drive complete with starter

Air Consumption: less than 2 CFM at 60 psi

Machine Arrangement: in-line only

Standard Equipment Items: adjustable infeed lanes, table top conveyor chain infeed, agitator infeed unit, grip type grouping plates, steel guide fingers, stop-start push button controls, case centering elevator, chain type conveyor for wood and plastic cases, combined case stop and index unit, automatic safety controls.

* Trademark for The Air Cush'n Packer is protected by U.S. Patent #3307328
