# COMPACKER - BOTTOM LINE

The COMPACKER BOTTOM LINE is a custom engineered automatic or on demand case erector/bottom sealer. The machine's efficient design is tailored to

your particular requirements and provides the capabilities of case erecting, bottom flap folding and sealing. Through the use of production tested designs backed by a

quarter century of COMPACKER experience and proven performance, the BOTTOM LINE provides optimum productivity and cost efficiency.

## FEATURES

- \* Fully automatic or on demand operation
- \* Choice of case designs RSC, FOL, CSSC, or HSC
- \* Choice of hot melt or pressure sensitive tape closure
- \* Easy changeover - most adjustments with

- hand cranks, requiring no special tools
- \* Speeds up to 20 cases per minute - depending on case size
- \* Easy-to-load - 6 ft. powered case magazine
- \* Intermittent motion lug & chain drive
- \* Welded tubular steel frame, with top of the

- line components for years of reliable service
- \* Electrical (P.C. Logic) or Pneumatic controls
- \* Simple, easy maintenance
- \* Many options available according to customer need

## Here's how simply your BOTTOM LINE will operate:

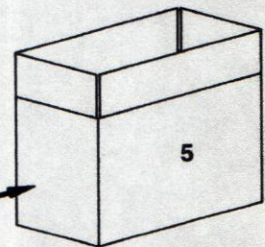

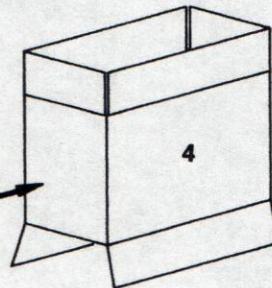

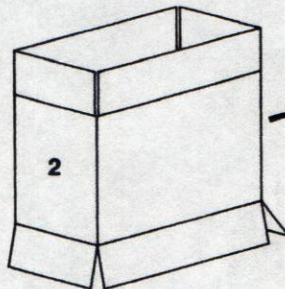

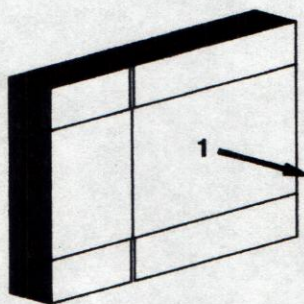

### DESCRIPTION OF OPERATION BOTTOM LINE

The sequence of activity is:

① K.D. case is retrieved from the magazine by a vacuum arm.

② During the retrieval motion the case is pulled against a plow which erects it. The trailing minor flap is tucked into position.

③ As the lug and chain drive moves the case from the erecting station the lead minor flap is folded into position.

④ The case is driven past adhesive applicator, major flap plows and into compression section.

⑤ Prior to compression, the case is mechanically squared. The compression plate is lowered to apply an even force to the glued flaps. The bottom sealed case is discharged for removal.
