

Case Sealing Equipment Designed to Fit Your Needs.

Compacker builds equipment that's designed to meet your job requirements. There are Compacker machines for erecting, loading and sealing corrugated cases, trays and wrap-arounds. All of them are backed by over 20 years of case packaging machinery experi-

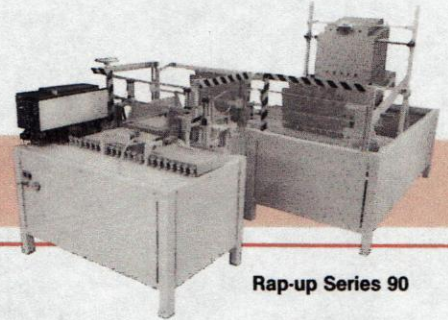

ence. Our machines are built to stay on line day-after-day, year-after-year. In fact, some of our first machines are still in daily use. That's one reason why Compacker machines are now packaging some of the best known brands in the world. Let us design the packaging system best suited for your requirements.

Endpacker II

The Bottom Line

Rap-up Series 90

Case Packing Systems

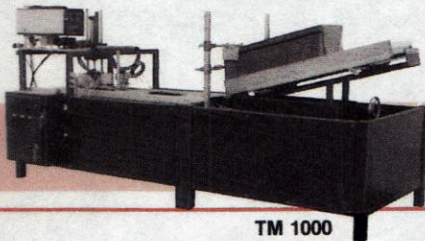

- Systems to pack side or end load cases.
- Automatic or semi-automatic.
- Hot melt, cold glue sealing or pressure sensitive tape.
