Electric Cappers

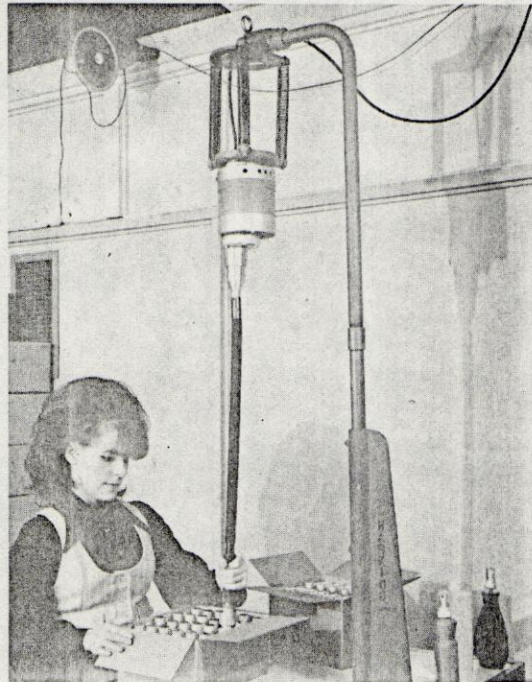

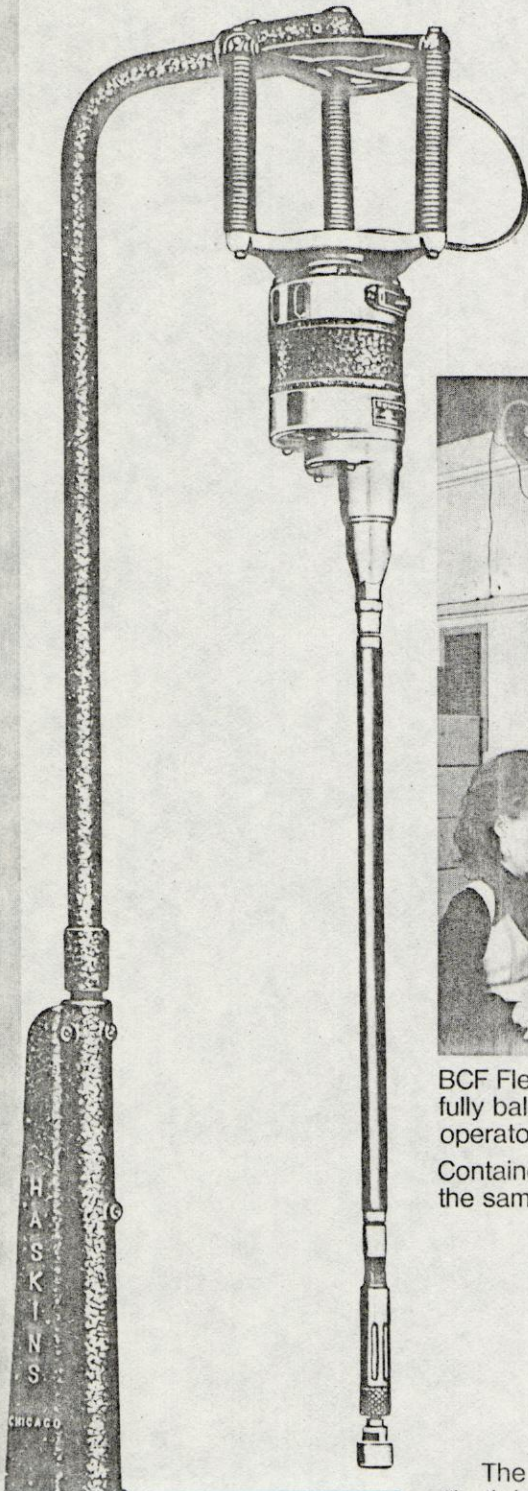

Quiet, energy efficient electric power (no need for air compressors or piping).

Powerful, constant speed, induction motor (115/230v.).

Tightens metal and plastic caps up to 54mm and larger.

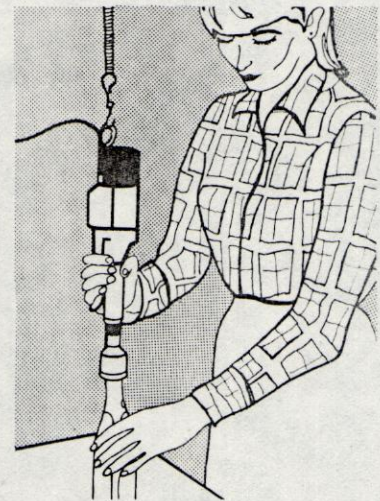

Chuck turns only when held against cap—and only until preset torque has been reached. Simple "click stop" adjustment of tension clutch guarantees precise uniform tightness—and you have your choice of soft, standard, or extra stiff clutch springs to meet the most varied capping requirements.

Uncapper models also available.

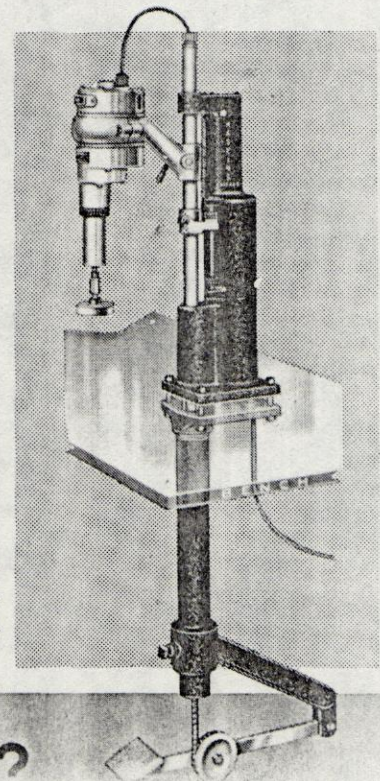

BCF FlexShaft drive combined with a carefully balanced spring suspension means less operator fatigue.

Containers need not always be in exactly the same position.

Hand held electric models available. Ask for details.

BP Foot pedal downstroke.

The quiet energy efficiency of the BCF—the "both hands free" productivity of the BCA-300.
