machinery, LLC

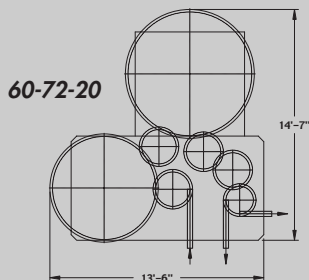

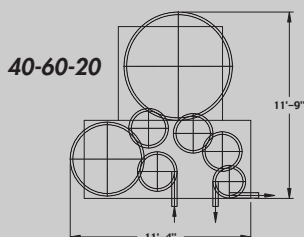

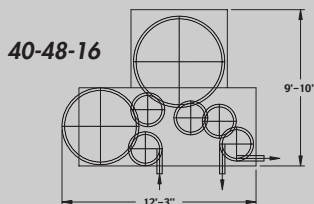

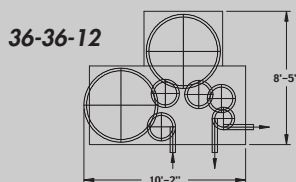

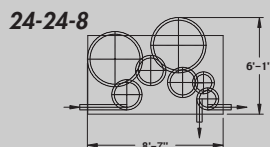

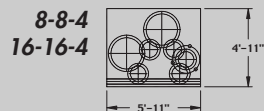

PET

The monobloc **RINSER-FILER-CAPPER** enables reliable consistent bottle filling for all your liquid PET products. The monobloc feature with "Total Neck Support" offers unsurpassed container control with limited use of valuable floor space. The greatest feature of this machine is the limited supervision required for this extremely operator-friendly packaging machine!

Rinser-Filler-Capper

PET

- **The rinsing station** offers thorough water or air rinse. A simplistic design with minimal parts offers dependable container control and ease of maintenance.
- **The filling station** using all metal (not plastic) 316L stainless steel contact parts gives consistent accurate fill levels either by gravity or pressure.
- **The cap-in-head (or pick & place) capper station** enables dependable container to cap control producing consistent cap placement and torque control required for today's high-speed operations.

Other features include:

- Gear Drive System
- Allen Bradley PLC with Touch Screen - Standard!
- 1" thick S.S. Deck plate, (Not a S.S. skin over a mild steel plate).
- Sport Cap or Push-Pull Cap ready.
