BuyLine 5152

*"Now all 24 dock doors have a Mars® air curtain. This makes the system very flexible and versatile. We now maintain steady temperatures, even on the coldest and hottest days. Before this installation, one of our shipping department's computers literally froze. That's not a problem anymore. An unexpected benefit was the measurable improved quality of our finished wood laminate products.*

Extra Power (EP) Series air curtains efficiently keep dirt, dust and insects out of your food facilities and other areas requiring a clean environment. These compact, unobtrusive units are popular for meat packing and food processing plants, supermarkets and commissaries, breweries, restaurants, schools, hospitals and cold storage plants. They are highly effective over large cold storage doors where they reduce humidity and ice buildup and seal in cold air. This results in substantial energy savings by preventing excessive operation of your refrigeration system.

The unit's self-contained one-piece metal housing is corrosion-proof and fire-retardant, easy to install and designed for fastening to the wall on both ends without any intermediate support.
