

MODEL HIS-900 Manual load and MODEL HIS-900 Fully Automatic  
Upper plexiglass guarding has been removed for clarity of photographs.

# Our Shuttle Cartoners Use Less Space...

A SHUTTLE Cartoner is a machine that eliminates the lugged carton transport chain conveyor. Instead a special walking beam device or SHUTTLE is used. You no longer have to worry about greasy chains marking your cartons, replacing bent flight lugs, replacing worn out chains or trying to adjust a machine by sliding sprockets. In its place you can now have a SHUTTLE that is quiet and smooth indexing, easily adjustable, shorter in length and with less moving parts!

The SHUTTLE Cartoner also has a number of not so obvious advantages that could not even be considered with a lugged chain cartoner. For example: changing centers as you index thru the machine, twisting or tipping one edge of the carton only at the closing station for difficult to square cartons and back to back transport thru the glue compression area for a shorter machine.

## Features:

- Positive vacuum feed carton set-up
- Heavy Duty welded frame
- Heavy Duty Ball bearings on all drive shafts
- Complete control systems with easy to operate control panels
- PLC control systems on automatic machines
- Semi-automatic machines are field convertible to auto load
- Large carton size range

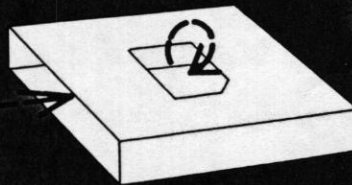

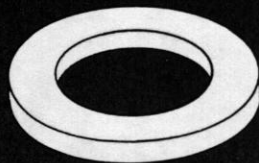

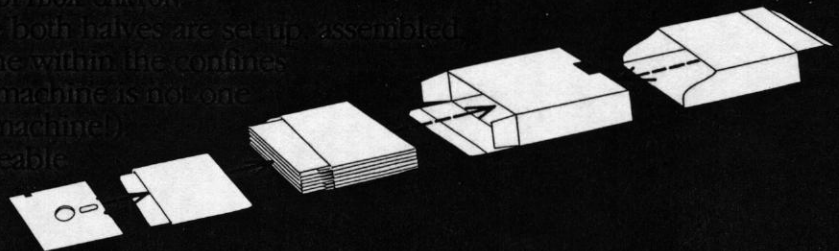

## Options:

- All types and combinations of flap closures
- Coders
- Wheel pot or extrusion adhesive systems
- Cluster Lubrication
- Right or left hand flow
- Custom product infeed systems
- Extended length carton magazines

The following are some applications that would require a very special machine with many manufacturers MGS was able to produce these machines with just minor alterations by using the SHUTTLE.

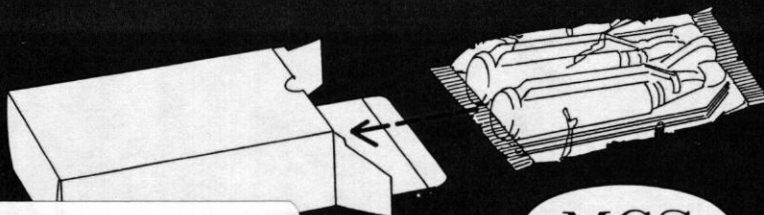

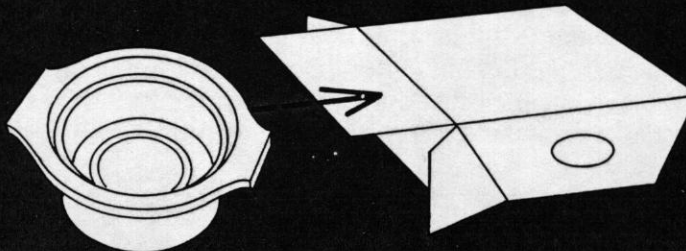

### FLOPPY DISK TELESCOPE AND OR SOFTBOX CARTON

A telescope style carton where both halves are set up, assembled, loaded and closed. This is done within the confines of the standard machine (the machine is not one inch larger than the standard machine). This machine is rapidly changeable to a standard non-telescope (softbox) carton.

**TAPE DISPENSER SLEEVE:** A roll of tape is loaded into a sleeve with inner flaps folded and glued. The SHUTTLE allows a flap folding mechanism to come up thru the middle of the carton, fold the flaps after adhesive is applied and then hold the flaps in compression while the machine indexes to the next station. Try doing that thru the bottom of flight chains!

**TAPERED SIDE FLAP CARTON:** Tapered or unusual style end flaps are a down to earth with the SHUTTLE!

**ICE CREAM CONE CARTON:** Delicate or fragile products to load are not out of this world for MGS!
