Send samples of your product for our evaluation . . . no charge.

Designed for the small batch paint packaging manufacturer providing accurate filling, ease of cleaning, and quick changeover.

A one-operator machine . . . the operator places the cans on with his right hand, and the covers on the filled cans with his left hand.

The cans move on a continuous moving platform conveyor and are automatically centered under the filling nozzle by the cam-controlled stop finger during the filling operation. The stop finger automatically releases the filled can on the platform conveyor; the operator puts the cover in place; the filled can and cover enter the first of two power driven rollers. The first of the rollers, which is slightly higher than the second, starts the cover and allows the excess air to escape from the can. The second roller securely seals the lid on the can.

The unit has a range of from 1/32 to and including gallons.

The machine is equipped with an explosion proof motor, variable speed drive, and fine fill adjustment, permitting precise adjustment of the fill while the machine is in motion.

SPECIFICATIONS

- Floor Space 67½" x 41"
- Table Height 34"
- Overall Height Approx. 64"
- Shipping Weight 1850 lbs.
- Motor ½ HP
- Capacity of Reservoir 9 gallons

MRM/Elgin maintains a staff of experienced engineers ready to assist in laying out and equipping a production line, or an entire plant. We will be pleased to conduct tests for packaging your product in our factory laboratory. Complete parts and unexcelled service are located near you.
