## Model FA-1H

**HIGH SPEED WRAPPING MACHINE  
for Cellophane, Waxed Paper, Foil or Plain Paper**

The Package FA-1H wrapping machine combines speed and versatility. It will wrap products in cartons, boxes, open trays or flat objects on cardboard at speeds from 65 to 150 packages per minute. A convenient handwheel regulates speed while machine is in motion.

Size changes within the FA-1H's range require minimum effort with easy handwheel adjustments and substitution of readily accessible parts. Wrapping material rolls can be inserted quickly and the automatic infeed has quick change features.

A versatile machine, the FA-1H handles packages from 4" to 12" long, 1 1/8" to 6" wide and 3/8" to 3 1/2" high.

Like all "Package" Machines, the FA-1H is designed and built to give you years of trouble-free service. New cam-operated elevators assure reliable high speed operation. Mechanically operated folders and improved heat controls result in neater folds and better sealing. A centralized lubrication system assures smooth operation.
