

Model GTL-3N1 Case Packer (Goodman Three-In-One™)

Erect, Pack and Seal Cases Within One Compact Machine!

Pearson's GTL-3N1 Case Packer (Goodman Three-In-One™) is a complete case packing system custom built to your project specifications. The GTL-3N1 reliably erects RSC cases, packs products either horizontally or vertically and seals full cases with either tape or hot melt adhesive at speeds up to 120 packages per minute depending on configuration.

The GTL-3N1 can pack a variety of package sizes and pack patterns for flexible, rigid and semi-rigid products. With a no-tool changeover of less than 10 minutes, you can run vertical or horizontal pack patterns on the same machine. The GTL-3N1 comes standard with a vacuum blower system reducing your overall air consumption. Optional stainless steel

construction with washdown for caustic production environments is also available. Built on a single, compact unified frame, the GTL-3N1 is your complete case packing system in one machine.

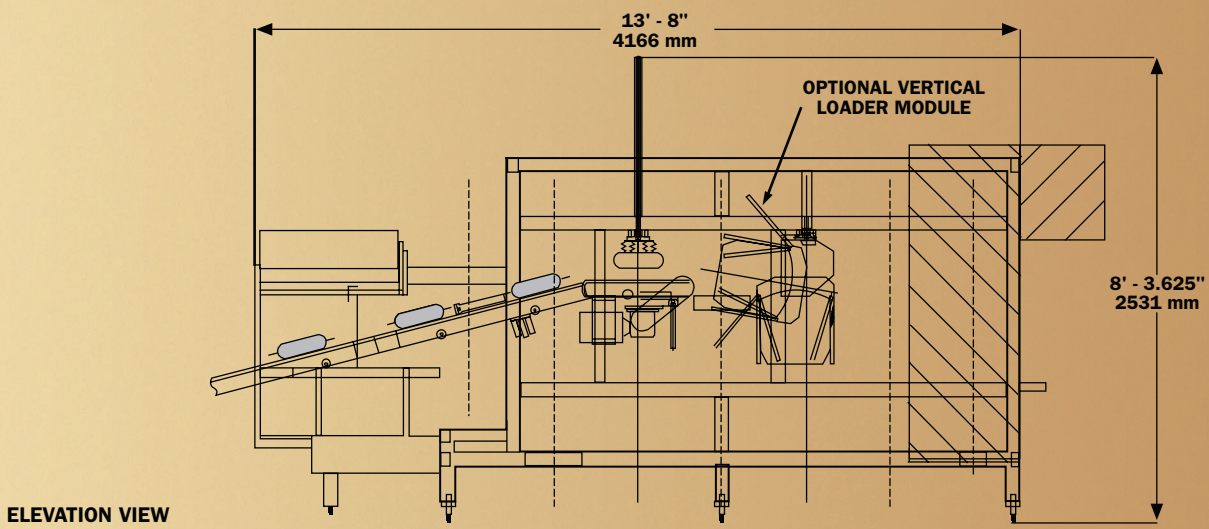

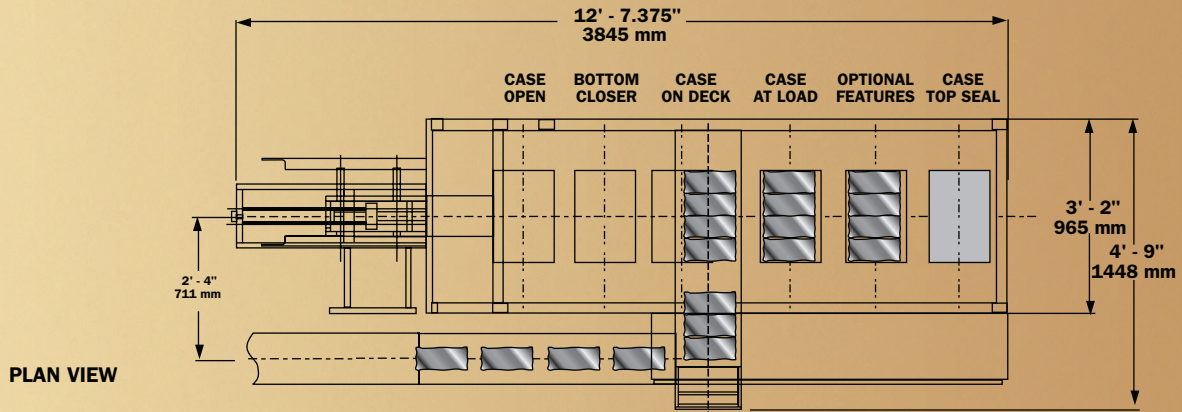

The GTL-3N1 can be equipped with one or two product conveyors to accept up to two sources of product into the machine. The layer forming conveyors of the GTL-3N1 are customized to handle your specific product type.

Like all Pearson products, the GTL-3N1 is backed by Pearson's experienced factory professionals as well as one of the largest teams of PMMI certified regional service technicians in the industry, available 24-hours a day, 7-days a week - worldwide.
