

F-45

The New Potdevin Flexographic Press

The new F-45!

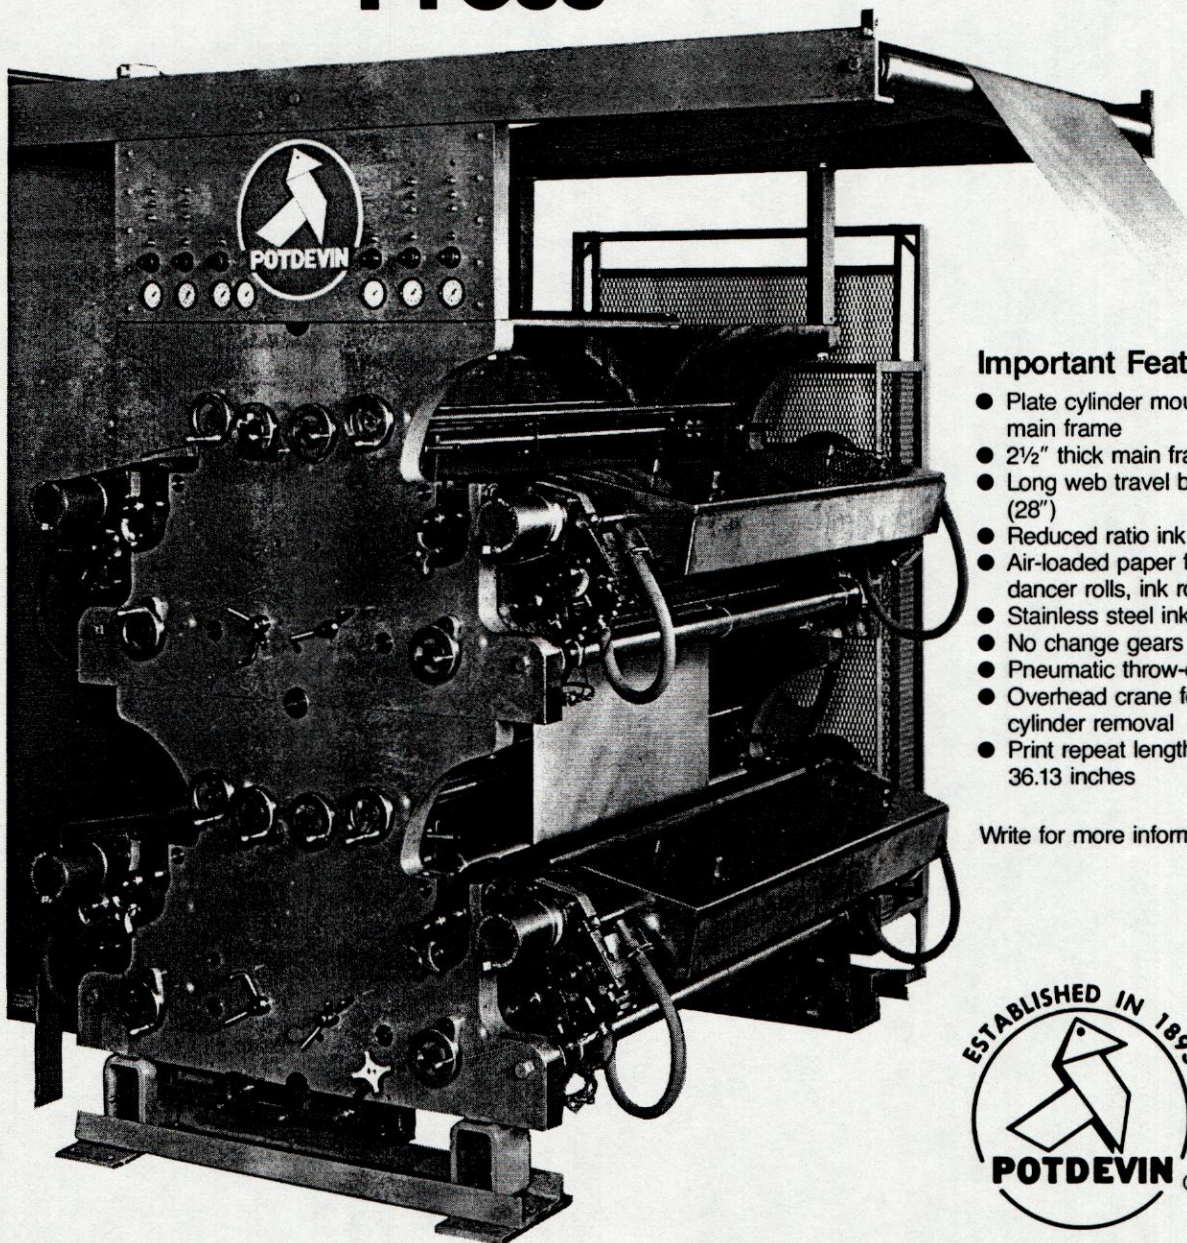

Its heritage is hundreds of rugged flexo units we've built over the years.

Quietly, consistently, they've established the Potdevin reputation for trouble-free, high quality printing.

Now, everything we've learned about speed and dependability we've built into the F-45. Added to your bag machine or used in roll-to-roll operation, the F-45 offers outstanding engineering features:

Helical inter-color gearing; precise registration; plate cylinders removable by built-in hoist; easy maintenance and ease of operation, with all routine adjustments . . . sidewise, circumferential, inter-color register, design location, squeeze roll pressure, impression and transfer roll contacts . . . controlled from the operator's side.

The new Potdevin F-45, available in various web widths, is built with a base two-color frame. Additional sections for four or six-color printing may be added.

Important Features

- Plate cylinder mounted on solid main frame
- 2½" thick main frames
- Long web travel between colors (28")
- Reduced ratio ink roll drives
- Air-loaded paper feed rolls, dancer rolls, ink rolls
- Stainless steel ink pans
- No change gears
- Pneumatic throw-offs
- Overhead crane for quick plate cylinder removal
- Print repeat length 8.48 inches to 36.13 inches
