

LEADERSHIP THROUGH INNOVATION

Only one company offers the technical insight gained over 30 years of pressure-sensitive labeling experience. Originally established in 1964 as a division of Avery/Dennison, Quadrel became an independent company in 1989 and offers a complete line of label application equipment.

Quadrel will design and build a machine for a specific application or budget, from the simplest tabletop unit, to variable data print & apply systems to the most sophisticated high speed rotary systems.

PRESSURE-SENSITIVE LABELING

Pressure-sensitive is the fastest growing package decoration technology in the world. New base materials and printing technologies challenge the imagination of Package Marketers and Engineers. Quadrel matches the imagination of today's packagers with innovative, technically-advanced labeling solutions.

ENGINEERING

Extensive CAD capability and a fully staffed engineering department provide maximum flexibility for standard and custom applications as well as ongoing Research and Development.

CUSTOMER SUPPORT

Prompt, accurate answers to questions are important. Our Customer Service Department is always ready to help with information on capabilities, prices, delivery, etc.

SERVICE AND PARTS

Responsive, professional technical support is vital to maintaining the productivity of machinery in the field. Quadrel keeps this commitment with experienced service technicians and a fully stocked, computer cataloged Parts Department.

LABEL APPLICATORS

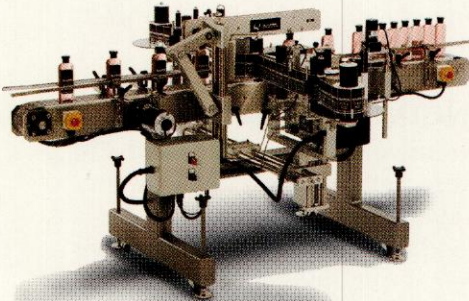

Quadrel's full line of **economically-priced, semiautomatic tabletop** systems provide simple label dispensing, side panel labeling and small and large diameter wraparound labeling up to 40 ppm.

Our **high speed, air-blow applicators and thermal transfer print & apply** units provide in-line solutions for promotional, product identification and compliance labeling.

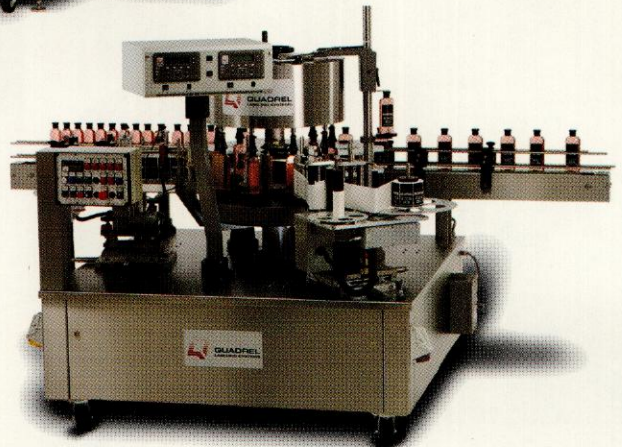

COMPLETE SYSTEMS

Quadrel's three distinct levels of **self-contained, fully automatic labeling systems** cover a wide range of front/back, top, bottom, side, wraparound or custom applications at speeds from 50 to 500 ppm.

All systems feature tool-free changeovers, universal product alignment and stepper or servo driven/microprocessor-controlled applicators. A full array of options including vision systems and validation packages support any level of required system monitoring or label on product verification.
