

SIMPLEX

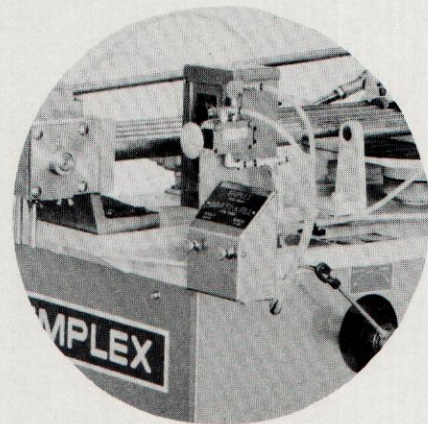

FILLER COMPANY

ADJUST -A- FILL*

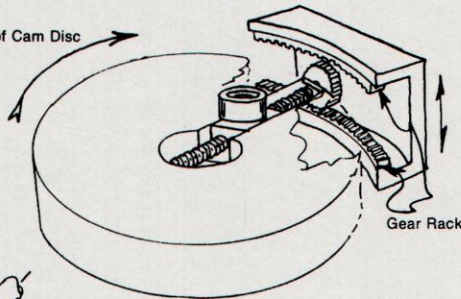

ELIMINATES NEED TO STOP MACHINE TO MAKE FILL ADJUSTMENTS

The Simplex ADJUST-A-FILL* enables the operator to adjust fill quantities without stopping the production line. It can be operated manually by the operator, by push-button — or by remote control systems such as check weighers or level sensors. Available on all Simplex piston fillers.

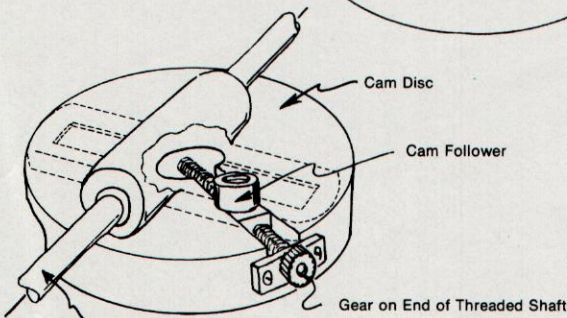

Direction of Rotation of Cam Disc

ADJUST-A-FILL* mounted on SIMPLEX PISTON FILLER

When unit is activated, gear rack is moved to UP or DOWN position. As cam wheel rotates, the gear on the fill adjustment screw is rotated either clockwise or counter-clockwise as it moves through ADJUST-A-FILL* unit — thereby increasing or decreasing fill.

Shaft Connected to Piston
