If you are looking for high speed, reliability, and easy maintenance in your wrap-around labeling then you're looking at the right machine.

The Stackpole/Phin SM 1200 has proven itself in numerous applications. In fact, we are so convinced of its sure-fire saleability that we build this one from stock. So you can count on quick delivery, too. The SM 1200 applies various size paper or foil labels to glass or plastic round containers using both hot melt and cold adhesives in recirculating systems. It can be adjusted to a wide range of label sizes and container diameters. The drive to the straight-through conveyor is infinitely

variable over the entire speed range. An independent variable speed drive to the infeed mechanism ensures that you can adjust the machine for individual line requirements. This is especially important for the gentle handling of lightweight containers at high speed.

The stationary adjustable magazine can be loaded easily while the labeler is operating.

The SM 1200X is available to handle larger containers. It has all the proven features of the SM 1200 plus bottle handling capability up to 6-1/2" diameter... Go with a winner! Stackpole/Phin's SM 1200-1200X.
