

The high speed beer bottle labeler.

The secret of the 1600's efficiency is its straight-through rotary design with no glue or vacuum assists for label pick-up. Fully mechanical, this labeler uses a patented label feed system that ensures correct positioning and application of body labels at high speed (up to 600 BPM). Our design philosophy on the 1600 also includes other benefits to the user. For example, it requires less space than many other labelers. And because of its simplicity the 1600 offers reduced downtime. And maintenance is easy.
