This, our newest stamper was designed to be integrated with our own labeling machine or as a separate unit for close coupling to machines built by other manufacturers. The SM 1900 saves floor space, eliminates the need to respot from labeler to stamper because of its positive bottle control, and provides additional compression time to ensure label adhesion. Its newly designed compression section is exceptionally positive and smooth.

# The low-cost strip stamper alternative to manual application.

This free standing machine was designed originally as an economical answer to manual application of excise stamps. And it still serves that purpose. However, we have since provided an automatic version as an option to eliminate hand loading. Either way, it will apply stamps at speeds up to 80 bottles-per-minute.

## Major features of the SM 2100:

Low cost to install and operate. Low maintenance.  
Few change parts. Simple operation.  
Easy conversion, manual to automatic.
