

Model CH-1800

Model CH-1800* - Cold/Heat Seal System for a unique packaging solution

System Packaging has combined its versatile, high quality Horizontal Double Web Cold Seal Machine (the Model 9000) using strip coated bubble or polyethylene with a heat seal cut-off, to produce packages that don't mold to the product shape, can have easy-open feature, and are easily returned – providing the extra value-added service your customers will appreciate. This is ideal for fulfillment applications currently using bags or mailers.

The CH-1800 easily produces 20 to 25 packages per minute using just one operator, and can make various mailer lengths on the fly. This system also allows you to stock rolls versus boxes, for additional cost savings and increased warehouse space.

The perfect system for packaging:

- ▶ Catalog / Internet Fulfillment
- ▶ Apparel / Clothing / Soft Goods
- ▶ Books / DVD's / CD's
- ▶ Parts that react with coatings and Latex
- ▶ Long / Irregular Products that are labor intensive to bag

*Patented

SYSTEM PACKAGING

Model CH-1800 and CH-2400
