Operating at the ideal storage temperature 53-57° F, the Spacesaver wine units are specifically designed to encourage the development of fine wine. Their compact footprints are all 24" deep, and are available in either 30" wide or 48" wide models. They can be built in, or installed freestanding on legs, casters, or a finished base.

Traulsen's unique wine rack controls sedimentation by reducing vibration. This specially designed shelf properly tilts bottles, keeping the corks moist and preventing bottle slippage. This has the added benefit of allowing easy access to all bottles and positioning these for easy label viewing. Each wine rack has an approximate capacity of 10-12 bottles per shelf (actual capacity may vary due to differing bottle diameters).

NOTES

NOTE: Figures in parentheses reflect metric equivalents.

1= Wattage is determined by listed amps X listed volts X an average run time of 70% for refrigerators and 80% for freezers.

2= Based on a 90 degree F ambient and 20 degree F evaporator.

Refrigeration System

A balanced, top-mounted refrigeration system, using R-134a refrigerant is located behind a one piece louver assembly for easy access. The factory preset temperature control helps provide the ideal environment to properly age and store fine wine (operating temperature 53-57°F), while maintaining the proper air flow to eliminate any odors. Automatic condensate removal is provided through use of a bottom mounted electric condensate evaporator.

Interior

Each model is supplied with a standard compliment of eight (8) wine racks per section. Traulsen wine racks hold approximately 10-12 wine bottle per shelf. Actual capacity will vary depending upon the diameter of bottles used.

Warranties

The standard warranty is a five year compressor warranty and a one year parts and labor warranty on all components and the cabinet. Additional warranties are available at extra cost.

Supplied With One
NEMA 5-15 P Plug

Continued product development may necessitate specification changes without notice.
