

## *Blister machine B 1880 MTK*

**The fastest blister machine in the world sets new standards in pharmaceutical production with every detail.**

### ***Award-winning high tech***

The Blister machine B 1880 is based on established high-performance machines and is available in the versions MTI (multiple-stroke intermittent sealing) and MTK (multiple-stroke continuous sealing). It combines forward-looking, innovative machine design with GMP compliancy, simple operation, top performance, suitability for process integration, and reliable, efficient production of the highest quality. Attaining an output of up to 1,300 blisters/minute, the B 1880 is the ideal solution for the production of mass batches in 3-shift operation.

### ***MTK version***

The B 1880 MTK with continuous filling and rotary sealing is the ideal super high-speed machine for standard blisters containing symmetrical products, such as round tablets and capsules, which can be handled by a vibratory feeder and fill channels without blocking the feed tracks. This method of packaging with continuous feeding and rotary sealing ensures the gentlest handling and most fluent production process.

## Blister machine B 1880 MTK

**The Blister machine B 1880 MTK at a glance. Technical data:**

<b>Output</b> [1/min]	max. 1,300 blisters	<b>Processable forming materials</b>	Al, PVC, PVC/PVDC, PVC/Aclar, PP, PET	
<b>Sealing principle</b>	rotary		<b>Processable lid materials</b>	Al, Al/paper, polyester/Al, PP
<b>Format area</b>		<b>Space required</b>		
Index x width	max. 280 x 284 mm		Machine width	approx. 1,670 mm
Forming depth	max. 12 mm		Machine height	approx. 1,998 mm
<b>Reel diameter</b>		Machine length	approx. 9,940 mm	
Lid material	max. 400 mm	<b>Net weight</b>	approx. 14,000 kg	
Forming material	max. 1,000 mm			

## Blister machine B 1880 MTK

### Components and features of the B 1880 MTK

- Dual support for reels of forming material up to 1,000 mm in diameter, also including buffer or splicer
- Motorized forming material unwind prevents traction and tension
- Three heating zones each for gentle heating of forming material
- Perfect forming, e.g. thanks to pressure cushions and direct cooling of forming tools
- Comprehensive range of feeders for every requirement
- Continuous rotary sealing – with monitored, self-levelling sealing roller that lifts when the machine stops, contact cooling of the web
- Servo-driven embossing and perforating with monitored tools
- Punch monitored by laser sensor and servo-driven lowering unit for maximum precision
- Simple, reliable blister transfer by means of vacuum conveyor
- State-of-the-art control concept with IPC and individual servo drives for flexible and operator-friendly use

### Additional advantages of the B 1880 MTK

- Central touch screen operation with 3-D visualization
- GMP-compliant machine design for operation and cleaning in accordance with pharmaceutical specifications
- Innovative door sliding and closing mechanism for optimum accessibility
- Shatterproof safety glass for optimum product and operator protection
- All media guided through the machine frame
- Clean room atmosphere thanks to controlled discharge of air and heat
- Internal heat transfer reduces energy required for clean room atmosphere
- Integration of separate production data acquisition system possible
- Predestined for line integration with the central line control system SCADA
